

# Ancillary Wire Drawing Equipment

A selection of ancillary options are available to add to your drawing process.

## Ancillary Options

**Accumulators**— For precise speed following between two machines.

**Rotating Die Box**— Ideal for maintaining round wire and longer die life.

**Dead Block Takeup Unit**— Ideal for nonstop operation in a drawing line.

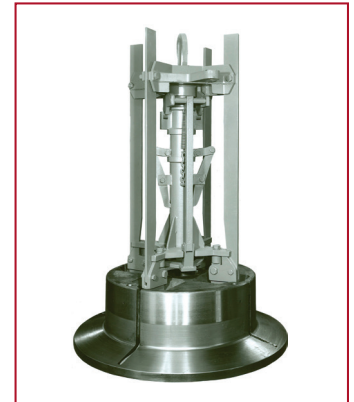

**Upenders**— Ideal for taking a horizontal coil and making it vertical to payoff or banding.

**Crimpers**— Used primarily for mesh wire.

**Packaging Turntable**— To convert normally unruly stands of wire coils (random fall) into high density packages (pattern laid). For use with Dead Block machinery.
