

Bull Blocks

For wire or tube .010" up to - 2" diameter.
Block sizes up to 96" diameter.
Air or water cooled blocks available.

Means of drawing wire, as a single unit. Wire is reduced in the die box, and collected in the capstan as a loose coil, or it goes into another process from the capstan. It can be used as a single unit, or in tandem with other machines.

Types of Bull Blocks

Horizontal Bull Block— Used for single draw coil removal on block pins or in line with Spoolers or Dead Blocks.

Inverted Bull Block— Used for single bright basic draw coils onto turntable. Inverted blocks can be above ground or with a pit for turntable (indexing turn tables are available).

Vertical Bull Block— To be used with block strippers.

Barrel Pack Bull Block— Paying out wire from a barrel
